Listening music

PROJECTS

Saviour eye for visually impaired

04/2021 - Ongoing

Designing a device which can help blind person in many different ways.

- Working with a team to design a device that helps visually impaired people in their daily routines making their life easier.
- Using raspberry pi with various other modules for object recognition.
- Yet to add many other features as face detection as well as distance calculation.

Music player application

Created a full stack music player application with reactJS and Django.

- Used reactJS as front-end and Django as backend.
- This application has a room functionality in which a host can start or end a room and other people can enter the room as guest and listen to music.
- The guests can also vote to skip a song.

Full stack e-commerce website

Created a full stack and fully responsive e-commerce website with Django web framework.

- This website is capable of creating new orders as well as tracking or cancelling orders.
